

ENLIGHTENED THINKING

Neodymium Magnet, Low Frequency Drivers

TN Series

From the development team that pioneered the application of Neodymium in a high-power professional driver comes a cost-efficient new range of pressed-steel loudspeakers using the same powerful magnet technology.

The Celestion TN Series features smart venting with advanced heatsink design to reduce thermal compression, precision flux management for increased sensitivity and more efficient magnet topology for reduced weight and, consequently, reduced cost.

Celestion: Your Global Driver Solutions Partner
